Hi Rick,

Can you change it so that you share the document with me and not the Jennifer Lewis in R4? I am "Jen" in the email system. Thanks!

Jen

Good afternoon,

I received some monitoring data from WVDEP related to MCHM samples collected in the field. I placed it in a folder I am sharing with you in OneDrive. Please let me know if you cannot get to the files.

The sample results are all from either storm water drainage and from monitoring wells. Water collected through remediation activities at these sample sites was trucked off and then some of it was sent to the landfill in question after mixing it with saw dust to render it a solid waste. As you can see from the sampling results, the concentration of the leaked product was pretty low.

I was informed that the waste characterization of the product that leaked waste was solely based on the MSDS sheet for the material and not any direct sampling of the product. This involved the state's OSC at the site during the heat of the initial start-up of remediation activities who determined that the product was not a listed waste and did not exhibit any hazardous characteristics.

I was also told today that contaminated soil and sorbents were handled similarly and disposed of at a landfill in Charleston. No issues have been raised by anyone regarding that disposal.

Please contact me if you have any questions.

Rick
